Domain Model
Peer-review for jh222xd

1.   This model would help us to understand what the domain model is representing and what objects is the most important ones. It is easy to see what defines a specific object and gives the developer good and correct information about the different objects.

2.   The secretary would absolutely understand what the domain model is representing. It would be easy to see the relationship between all the objects and their attributes.

3.   We like the attributes on the objects. We also like that you describe the relations between all objects, because it is much more easier to understand what the whole domain model is all about.

4.   The things we would have like to have seen on your domain model would be some kind of registrationNr or boatID for the Boat and a identificationNr for the Berth, in that way it is much easier to see what parking spaces is available and not available. Other than that the domain model contains everything we thought was necessary to complete the domain model.

5.   The domain model has definitely passed the grade 3 because of it's choice of main objects, attributes and the relationship between them.
